

REMARKS/ARGUMENTS

Claims 1-43 are pending. By this Amendment, claims 1-2, 19, 26, 34-36, and 40 are amended. No new matter is added. Support for the claims can be found throughout the specification, including the original claims, and the drawings. In particular, the Examiner is directed to paragraph [0053] of the present application. Reconsideration in view of the above amendments and following remarks is respectfully requested.

The Office Action rejected claims 1-13, 15-29, and 34-38, under 35 U.S.C. §102(b) as being anticipated by Kunii et al. (hereinafter "Kunii"), U.S. Patent Publication No. 2002/0122080. The rejection is respectfully traversed.

Independent claim 34 recites, *inter alia*, transmitting a radio frequency signal or an infrared signal corresponding to a reservation-recording information from the mobile terminal to a recording apparatus based on a reservation-recording key of the mobile terminal to perform power management of the recording apparatus and a reservation-recording in the recording apparatus based on the reservation-recording information. Independent claim 35 recites, *inter alia*, transmitting a reservation-recording information with a subscriber's IP address in a transmission packet form to perform power management of the recording apparatus and a reservation-recording in the recording apparatus based on the reservation-recording information, wherein a radio frequency signal or an infrared signal corresponding to the reservation-recording information is transmitted to the recording apparatus by selecting a reservation-recording key of the mobile terminal based on the searched broadcasting program information. Independent

claim 36 recites, *inter alia*, a receiver configured to receive a radio frequency signal or an infrared signal corresponding to a reservation-recording information via a reservation-recording key of a mobile terminal.

Independent claim 19 recites, *inter alia*, a display device that displays data information regarding the broadcasting program information output from the controller on a screen, wherein the system is configured to transmit a radio frequency signal or an infrared signal corresponding to a reservation-recording information from the mobile terminal to the recording apparatus based on a reservation-recording key of the mobile terminal to perform power management of the recording apparatus and a reservation-recording in the recording apparatus based on the reservation-recording information. Independent claim 26 recites, *inter alia*, a mobile terminal that transmits a radio frequency signal or an infrared signal corresponding to a reservation-recording information from the mobile terminal to a recording apparatus based on a reservation-recording key of the mobile terminal to perform power management of the recording apparatus and a reservation-recording in the recording apparatus based on the reservation-recording information.

Kunii does not disclose or suggest such features of independent claims 34, 35, 36, 19, and 26. Further, Kunii does not disclose or suggest the respective claimed combinations of independent claims 34-36, 19, and 26.

Accordingly, independent claims 34, 35, 36, 19, and 26 define over Kunii. Dependent claims 1-13, 15-18, 20-25, 27-29 and 37-38 are allowable over Kunii in view of their respective dependency on independent claims 34, 35, 36, 19, and 26, as well as for their added features.

The Office Action rejected claims 14, 30-33, and 39-43 under 35 U.S.C. §103(a) as being unpatentable over Kunii in view of Atkinson et al. (hereinafter “Atkinson”), U.S. Patent No. 6,760,850. The rejection is respectively traversed.

Dependent claims 14, 30-33, and 39 are allowable over Kunii at least for the reasons discussed above with respect to independent claims 35, 36, and 26, from which they respectively depend, as well as for their added features. Atkinson fails to overcome the deficiencies of Kunii, as it is merely cited for allegedly teaching a wakeup LAN module.

Independent claim 40 recites, *inter alia*, a receiver configured to receive a radio frequency signal or an infrared signal corresponding to a reservation-recording information via a reservation-recording key of a mobile terminal.

Kunii does not disclose or suggest such features, or the claimed combination of independent claim 40. Atkinson fails to overcome the deficiencies of Kunii, as it is merely cited for allegedly teaching a wakeup LAN module.

Accordingly, the rejection of independent claim 40 over Kunii should be withdrawn. Dependent claims 41-43 are allowable over Kunii and Atkinson at least for the reasons discussed above with respect to independent claim 40, from which they depend, as well as for their added features.

Serial No. **10/813,113**
Amendment dated June 17, 2009
Reply to Office Action of September 18, 2008

Docket No. **P-0581**

CONCLUSION

In view of the foregoing amendments and remarks, it is respectfully submitted that the application is in condition for allowance. Favorable consideration and prompt allowance are earnestly solicited.

If the Examiner believes that any additional changes would place the application in better condition for allowance, the Examiner is invited to contact the undersigned attorney at the telephone number listed below.

To the extent necessary, a petition for an extension of time under 37 C.F.R. 1.136 is hereby made. Please charge any shortage in fees due in connection with the filing of this, concurrent and future replies, including extension of time fees, to Deposit Account 16-0607 and please credit any excess fees to such deposit account.

Respectfully submitted,
